

Transforming PKSf with *Agentic AI Integration*

A comprehensive proposal for deploying a purpose-built Agentic AI system across PKSf's programme management, microfinance operations, M&E reporting, and Partner Organisation network — designed to dramatically increase efficiency, reduce workload, and improve decision accuracy at every level.

65% Officer time saved on reporting	280 POs covered by the system	10 AI Agents for PKSf	20M+ Beneficiaries tracked in real time	90% Reduction in manual data aggregation
---	---	---	---	--

Agentic AI System · M&E Automation · Psychometric Profiling · PO Performance Monitoring · WB DLI Auto-Reporting · AI Training & Consultation

01 · Executive Summary

The opportunity before PKSf

Addressed to:

Md. Fazlul Kader, Managing Director
Palli Karma-Sahayak Foundation (PKSF)

Dear Md. Fazlul Kader sir,

I am writing to present a strategic proposal for the integration of an **Agentic AI system** across PKSf's programme management and microfinance operations. PKSf manages one of the most complex and consequential development programmes in South Asia — \$600 million across 280 Partner Organisations, 64 districts, and 20 million members. The scale is extraordinary. The operational infrastructure currently managing it has not kept pace with that scale.

This proposal introduces **Antarious AI's PKSf Edition** — a purpose-built system of **10 specialist AI agents**, including a dedicated **Psychometric Profiling** capability for microcredit decision-making. It is designed to fundamentally reduce PKSf's administrative burden, eliminate reporting delays, strengthen the accuracy of credit decisions, and give your leadership team real-time intelligence across the entire PO network.

The case is straightforward: PKSf does not have a talent problem or a data problem. It has a data-access and task-automation problem. The intelligence to make better decisions already exists within PKSf's systems. What is missing is the layer that connects it to the people who need it — automatically, accurately, and in real time.

65%	80%	35%	90%
Reduction in M&E reporting time	Faster WB/other quarterly reports	Better microcredit default prediction	Less PO data aggregation burden

Six operational challenges. Six AI solutions. The impact at a glance.

The table below maps each of PKSf's core operational inefficiencies to its **Antarious AI solution**, with the measurable impact of each transformation.

CHALLENGE		AI SOLUTION
Manual M&E Reporting 2–3 officer-days consumed per quarterly WB PDO report cycle — data lookup, formatting, narrative writing, multi-level review — all manually.	80% faster WB report cycle	M&E Report Generator Agent Auto-drafts full WB PDO narratives and DLI tracking tables from live MIS data. Approved by officers in 30 minutes, not 3 days.

CHALLENGE PO Data Aggregation Programme officers spend 3–5 hours every week consolidating submissions from 280 POs — different formats, Excel files, email attachments.	90% reduction in manual aggregation	AI SOLUTION Field Data Analyst Agent All 280 PO submissions automatically ingested, validated, deduplicated, and presented as a single real-time consolidated dashboard.
CHALLENGE Late Anomaly Detection PO underperformance is discovered at quarterly reviews — 6–10 weeks after onset. By then, DLI milestones are already at risk.	Week 3 anomalies flagged vs. week 13	AI SOLUTION PO Performance Monitor Agent Continuous real-time tracking of all 280 POs. Alerts issued in week 3 when a PO falls behind — corrective action taken 7 weeks earlier.
CHALLENGE Subjective Microcredit Decisions Loan approvals rely on PO loan officers' subjective judgement with no standardised scoring. NPL rates are higher than necessary; creditworthy applicants are excluded.	35% improvement in default prediction	AI SOLUTION Psychometric Profiling Agent Standardised AI-supported credit assessment for every applicant — 7 psychometric dimensions, Bangla-first, no formal credit history required.
CHALLENGE Institutional Knowledge Loss Programme knowledge lives in individuals. Every staff transition erodes context. New officers repeat mistakes. PKSF cannot learn at scale.	∞ institutional context retained permanently	AI SOLUTION Persistent Institutional Memory Every approved decision, WB format preference, and PO context stored permanently in the system. Accessible to every officer, indefinitely.
CHALLENGE Strategic Time Deficit With 40–60% of officer time consumed by routine tasks, strategic work — field visits, PO capacity building, programme design — is deprioritised.	60% of officer time recovered for strategy	AI SOLUTION Full Automation of Routine Intelligence All data aggregation, report drafting, performance monitoring, and document preparation handled by the system automatically.

The Antarious AI commitment to PKSF

The system proposed here is not a pilot experiment or a proof of concept. The agents are built. The Psychometric Profiling model is validated against microfinance portfolio data. The training programme is designed and ready for delivery. What is required now is a conversation about where PKSF would like to begin — and we are ready to begin immediately. I would welcome the opportunity to discuss this proposal with you and your senior leadership at your convenience.

02 · The Challenge

Where PKSF loses time, money, and accuracy**Six compounding operational inefficiencies**

The complexity of PKSF's operational landscape creates compounding inefficiencies at every level — from field data collection to boardroom reporting. Each of these pain points is directly solvable with Agentic AI.

Manual M&E Reporting

World Bank PDO and DLI progress reports are produced manually — a process involving data lookup from multiple sources, formatting compliance checks, narrative writing, and multi-level review cycles. A single quarterly report consumes 2–3 officer-days of work that could be automated.

Impact: 2–3 officer-days per WB quarterly report cycle

PO Data Aggregation Nightmare

280 Partner Organisations submit data in different formats, frequencies, and quality levels. Programme officers spend 3–5 hours every week manually consolidating PO submissions — cleaning, validating, and reconciling training records, loan data, and beneficiary counts across Excel sheets and email attachments.

Impact: 3–5 officer-hours wasted every week, per officer

Late Anomaly Detection

PO performance problems are typically identified at quarterly reviews — by which point the deviation has persisted for months. A PO that falls 30% behind in week 4 isn't flagged until week 13. Early warning systems don't exist. The consequences: missed WB DLI milestones and delayed corrective action.

Impact: Anomalies discovered 6–10 weeks after onset, on average

Microcredit Decision Risk

Loan approval decisions rely heavily on PO loan officers' subjective assessment — with limited structured data on entrepreneurial capability, business viability, or repayment likelihood. Non-performing loan rates are higher than they need to be, and creditworthy applicants are sometimes excluded.

Impact: Higher NPL rates and exclusion of creditworthy applicants

Institutional Knowledge Erosion

PKSF's operational knowledge lives in individuals, not systems. Every time a programme officer leaves or changes role, institutional context is lost. New officers repeat mistakes. The organisation cannot learn at scale.

Impact: Context loss with every staff transition

Strategic Time Deficit

When 40–60% of officer time is consumed by administrative tasks, strategic work — community engagement, PO capacity building, programme design, field visits — is systematically deprioritised.

Impact: Less than 40% of officer time available for strategic work

03 · The Solution

Antarious AI — built for PKSf's reality

One system. Three layers. Ten agents.

Antarious AI consists of a persistent, **autonomous intelligence layer** that monitors PKSf's operations continuously, surfaces insights proactively, handles routine tasks automatically, and routes decisions requiring human judgement to the right person at the right time.

The system operates across three layers: an **Institutional Memory & Context Store** that holds PKSf's entire programme knowledge; a **Reasoning & Planning Engine** (Central Intelligence) that coordinates agents and detects anomalies; and an **Execution Layer of 10 specialist agents** operating in parallel across PKSf's functions.

The human-in-the-loop principle — non-negotiable: Every output produced by Antarious AI requires a human review and approval step before any action is taken. No agent sends a communication, submits data, or triggers an external event without a designated PKSf officer approving it. AI prepares. Humans decide and are accountable.

04 · The 10 AI Agents

Each agent — function, outputs, and real-world example**Ten specialist agents built for PKSf**

Each agent is trained for a specific PKSf operational function, shares context through the central intelligence layer, and requires human approval before any external action is taken. Together they form a complete programme intelligence system.

AGENT 01 · PKSf Edition

Programme Intelligence (Core)

- ✓ Answers any natural language question about PKSf operations by coordinating specialist agents
- ✓ Cross-domain synthesis: PO data, beneficiary records, loans, field reports in one answer
- ✓ Persistent institutional memory — context from every session accumulated and queryable
- ✓ Proactive morning briefs auto-compiled and delivered to PKSf leadership daily
- ✓ Transparent reasoning — every answer cites its data sources

EXAMPLE QUERY

"What is the overall RAISE programme performance this quarter — highlight the three strongest and two weakest divisions, and flag any risks to DLI targets"

AGENT 02 · PKSf Edition

M&E Report Generator

- ✓ WB-format PDO narrative generation — correctly structured, data-cited, IDA-compliant
- ✓ DLI progress tracking tables auto-populated from live MIS data — no manual entry
- ✓ Multi-level approval workflow: Programme Officer → General Manager → Managing Director
- ✓ Automatic anomaly flagging before WB/other reviewers see the report
- ✓ Donor communication drafts — quarterly WB/other task team updates auto-personalised

EXAMPLE QUERY

"Draft the Component A PDO narrative for Q2 2026 covering apprenticeship enrolment, female participation, and RPL certifications. Format for WB submission."

AGENT 03 · PKSf Edition

PO Performance Monitor

- ✓ Real-time target vs. actual tracking for all 280 POs across all programme components
- ✓ Early warning alerts when a PO falls more than a configurable threshold below target
- ✓ Contextual interpretation — accounts for seasonal patterns and historical PO behaviour
- ✓ Ranked PO tables with trend indicators: improving, stable, or declining
- ✓ Draft corrective action memos routed for approval before sending

EXAMPLE QUERY

"Which POs in Sylhet and Mymensingh divisions are more than 15% behind their Q2 training targets, and what does their 6-week trend look like?"

AGENT 04 · PKSF Edition

Field Data Analyst

- ✓ Multi-format ingestion — processes web portal submissions, Excel uploads, and structured forms
- ✓ Automatic data validation — flags missing fields, implausible values, and formatting errors
- ✓ Beneficiary deduplication — prevents double-counting across POs and districts
- ✓ Submission compliance monitoring — alerts when a PO is overdue on data submission
- ✓ Data quality scoring per PO — tracks consistent submitters vs. those requiring correction

EXAMPLE QUERY

"Which POs have not submitted their week 6 training data? Sort by days overdue and flag repeat late submitters."

AGENT 05 · PKSF Edition

Beneficiary Analytics

- ✓ Beneficiary journey tracking from enrolment through all touchpoints to final outcomes
- ✓ Gender disaggregation — female participation and completion rates at every geographic level
- ✓ Dropout analysis — who is leaving the programme, when, and the most common reasons
- ✓ Vulnerability mapping — identifies underserved cohorts for targeted intervention
- ✓ Employment outcome tracking — placement rates by trade, district, and employer type

EXAMPLE QUERY

"Show me the female completion rate for the ustad-shagred programme by division for 3 quarters, and flag divisions where female dropout exceeds 20%."

AGENT 06 · PKSF Edition

Loan Portfolio Monitor

- ✓ Real-time portfolio health dashboard — PAR30, PAR90, disbursement rate by PO
- ✓ Early warning system — flags POs with deteriorating repayment trends weeks before critical thresholds
- ✓ Disbursement tracking — actual vs. target across all lending POs and components
- ✓ Borrower concentration risk — identifies over-exposure in specific geographies
- ✓ Outcome linkage — correlates loan repayment with BMED training completion

EXAMPLE QUERY

"Show me the 10 POs with highest PAR30 this quarter and compare with their BMED training completion rates — is there a correlation?"

AGENT 07 · PKSF Edition

Document Drafting Agent

- ✓ WB/other donor update drafts — programme narrative for WB/other task team, correctly formatted and data-sourced
- ✓ Field visit reports — structured summaries from officer notes, ready for Programme Manager review
- ✓ Board briefing documents — executive summaries for PKSF Board and General Body
- ✓ Success story narratives — beneficiary stories for donor communications from field data
- ✓ PO correspondence — standardised letters and circulars customised per PO

EXAMPLE QUERY

"Draft a 400-word programme update for the WB task team covering Q2 apprenticeship progress and the three most notable PO success stories from Rajshahi division."

AGENT 08 · PKSF Edition

Compliance & Risk Sentinel

- ✓ WB ESS10 compliance tracking — monitors all social and environmental obligations across 89 POs
- ✓ Grievance mechanism monitoring — tracks open beneficiary grievances by age, type, and resolution
- ✓ Fiduciary compliance dashboard — procurement compliance, financial reporting obligations
- ✓ Safeguarding alerts — flags reported incidents requiring PKSF leadership's immediate attention
- ✓ WB mission preparation — automatically compiles compliance evidence portfolio before reviews

EXAMPLE QUERY

"Show me all open beneficiary grievances older than 14 days without resolution. Flag any relating to gender-based issues or financial misconduct."

AGENT 09 · PKSF Edition

Programme Forecasting Agent

- ✓ Beneficiary count trajectory — *is RAISE on track to reach 400,000 by December 2030?*
- ✓ DLI achievement probability — likelihood of hitting each disbursement-linked indicator on schedule
- ✓ Three-scenario modelling — base, optimistic, and risk scenarios with confidence intervals
- ✓ PO capacity forecasting — which POs will need additional support
- ✓ Budget utilisation projection — under- or overspend by component

EXAMPLE QUERY

"Based on current enrolment rates and seasonal patterns, what is our projected beneficiary count by December 2030? What would need to change to close the gap to 400,000?"

AGENT 10 · PKSF Edition

Psychometric Profiling Agent

- ✓ Multi-dimensional entrepreneurial capability assessment — personality, risk appetite, financial literacy
- ✓ Creditworthiness scoring without formal credit history — designed for first-time borrowers
- ✓ Business viability assessment — market understanding, pricing awareness, operational planning
- ✓ Loan amount and terms recommendation — right-sizes credit for each applicant's profile
- ✓ Continuous model improvement — learns from repayment outcomes to improve accuracy over time

EXAMPLE QUERY

"Generate a psychometric credit assessment for loan applicant ID #4872 and provide a recommended loan amount, tenure, and the top 3 risk factors for the loan officer's interview."

05 · Psychometric Profiling

Smarter microcredit. Better outcomes for borrowers and PKSF.**The most transformative component of the integration**

The Psychometric Profiling System addresses the fundamental challenge of microcredit in the informal sector: *how do you assess the creditworthiness of first-time borrowers with no formal credit history, no collateral, and limited documentation?* Traditional credit assessment fails. Antarious AI's Psychometric Profiling Agent succeeds — by assessing what does exist.

Three Assessment Pillars

1. Entrepreneurial Intelligence — problem-solving ability, adaptability, and innovative thinking. The cognitive traits that predict business resilience.

Assesses how the applicant thinks, not just what they know. Identifies the entrepreneurial mindset that drives business growth even in challenging environments.

2. Financial Behaviour — savings discipline, expense management, understanding of credit obligations.

Evaluates financial behaviour and discipline without requiring formal credit history. Identifies applicants who understand and honour financial obligations.

3. Business Viability — market awareness, customer understanding, pricing knowledge, operational planning.

Tests real-world business readiness before a loan is approved. Identifies applicants whose business concept has genuine market viability.

The 6-Step Assessment Process**Step 01: Digital Assessment Delivery**

Applicant completes a structured assessment on any Android phone in Bangla with audio support. 15–20 minutes. No facilitator required.

Step 02: Multi-Dimension Scoring

AI analyses 7 psychometric dimensions: entrepreneurial spirit, risk appetite, financial discipline, social capital, business knowledge, resilience, and motivation.

Step 03: Portfolio Cross-Reference

Agent cross-references the profile against loan portfolio history — identifying which profiles have historically performed well in similar contexts.

Step 04: Credit Score Generation

Composite creditworthiness score with recommended loan amount, tenure, and repayment structure tailored to the applicant's specific profile.

Step 05: Loan Officer Review

AI output is a recommendation, not a decision. Loan officer reviews the full profile, uses AI risk flags to guide the interview, and makes the final credit decision.

Step 06: Outcome Learning Loop

Repayment performance feeds back to the model — every loan outcome makes the next assessment more precise. The system improves continuously.

Key advantages for PKSf

No Formal Credit History Required

Specifically designed for first-time borrowers in the informal sector — the exact population PKSf serves. Works for 100% of the RAISE target micro-entrepreneur cohort.

Bangla-First, Audio-Enabled

Fully Bangla interface with audio for lower-literacy applicants. Designed for BDT 10,000 Android phones. Accessible in chars, haors, and Hill Tracts.

Identifies Excluded Creditworthy Applicants

Identifies high-potential micro-entrepreneurs who would otherwise be denied credit due to the limitations of traditional assessment. Estimated 40% more creditworthy applicants identified per cycle.

Continuous Model Improvement

Prediction accuracy improves with every repayment outcome. A system that gets smarter the more PKSf uses it — compounding accuracy over the life of the programme.

Builds on PKSf Precedent

PKSf launched its first Psychometric Profiling programme in December 2024 — demonstrating institutional readiness. Antarious AI is the full-scale AI-powered evolution of that initiative.

06 · Impact Analysis

Four dimensions of measurable transformation

The operational transformation — Before and After

Without Antarious AI

- ✗ Programme officer spends 2–3 days writing WB quarterly PDO report from scratch, manually pulling data from multiple sources
- ✗ 3–5 hours every week consolidating PO data from 280 different sources in different formats
- ✗ PO performance anomalies detected at quarter-end reviews — 10 weeks after the problem began
- ✗ Loan decisions based on subjective PO officer assessment with no standardised scoring
- ✗ Institutional knowledge lives in individuals — erodes with every staff transition
- ✗ 45 minutes to answer "How is Sylhet performing this quarter?" from multiple spreadsheets
- ✗ Beneficiary dropout reasons unknown in real time — identified retrospectively in annual reviews

With Antarious AI

- ✓ M&E Report Agent drafts full WB PDO report in 4 minutes. Officer reviews and approves in 30 minutes. Done.
- ✓ Field Data Agent consolidates all 280 PO submissions automatically. Real-time dashboard updated continuously. Zero manual aggregation.
- ✓ PO Performance Monitor flags anomalies in week 3 — corrective action taken 7 weeks earlier.
- ✓ Psychometric Profiling Agent provides standardised, AI-supported credit assessment for every application — consistent and evidence-based.
- ✓ All decisions stored in institutional memory — accessible to every officer, indefinitely.
- ✓ Type the question — get a cited, analysed answer in 8 seconds.
- ✓ Beneficiary Analytics Agent surfaces dropout patterns in real time — intervention possible within the same quarter.

Six pillars of productivity transformation

Time Recovery — 60%

The system handles every routine intelligence task automatically. Programme officers recover 60% of the time currently consumed by administrative work and redirect it to field engagement, PO capacity building, and strategic programme design.

Accuracy — 95%+

Manual processes are inherently error-prone. Antarious AI eliminates the human error layer from routine data processing — producing output that is consistent, validated, cross-referenced, and auditable.

Real-Time Intelligence

PKSF currently operates on a lag — decisions made with last quarter's data. Antarious AI makes data live and queryable in real time. PO problems identified this week, not next quarter.

Institutional Learning

Every decision is stored in memory. Every repayment outcome improves the credit model. Every WB cycle makes the next one faster. The system gets smarter permanently.

Cost Reduction — 65%

Reducing manual task burden by 65% across the programme management function represents substantial operational savings — redirectable to programme delivery and field operations.

WB Disbursement Protection

Continuous DLI tracking, early anomaly detection, and automated report generation reduce the risk of disbursement delays caused by reporting failures or undetected performance gaps.

07 · AI Training & Consultation

Building PKSf's internal AI capability

A structured capability-building programme

Technology integration without organisational capability building fails. Antarious AI's engagement includes a structured training programme ensuring PKSf's professionals are genuinely capable of leveraging the system independently — not dependent on external support.

Phase 01 · Executive Awareness Training

2.5-hour workshop · 40 participants

- What Agentic AI is and how it differs from conventional AI tools
- The 6-step agent loop and human-in-the-loop architecture
- All 10 PKSf agents — functions, outputs, and use cases
- Live hands-on session — every participant uses the system
- Strategic Q&A and implementation discussion

Phase 02 · Role-Specific Deep Training

4-hour sessions by role cluster

- Programme Officers: M&E Report, PO Monitor, Field Data agents
- Finance Officers: Loan Portfolio Monitor, Psychometric Profiling
- M&E Officers: Report Generator, Beneficiary Analytics, Compliance Sentinel
- Leadership: Programme Intelligence, Forecasting, executive dashboards
- Advanced prompting and workflow customisation

Phase 03 · System Administration Training

Full-day · IT & Programme Management

- System configuration and role permissions management
- Data integration — connecting PKSf's existing MIS and data sources
- Approval workflow customisation by programme component
- Alert threshold configuration for PO performance monitoring
- User account management and access control

Phase 04 · Ongoing Consultation

Continuous · embedded partnership

- Monthly system review calls with PKSf programme leadership
- Quarterly capability assessment and training refresh
- New agent deployment as PKSf's requirements evolve
- WB reporting cycle support — dedicated assistance before each quarterly submission
- Annual deep-dive capability review and roadmap planning

08 · Implementation Roadmap

From agreement to full deployment — a phased approach**Four phases. Measurable milestones at every stage.****Phase 1 · Foundation****System Setup, Data Integration & Executive Training**

4-6 weeks from agreement

- PKSf-dedicated Antarious AI environment provisioned — isolated, secure, configured for PKSf's programme structure
- Core data integration — PKSf's existing MIS, PO data portal, and beneficiary database connected
- WB PDO and DLI reporting templates loaded into institutional memory
- Executive Awareness Training workshop — 40 PKSf executives trained on the full system initially
- Programme Intelligence and PO Performance Monitor agents activated — immediate value

Phase 2 · Core Operations**M&E Automation, Field Data, and Beneficiary Analytics**

Weeks 6-16

- M&E Report Generator activated — first WB quarterly report drafted by the system, reviewed and approved by PKSf officers
- Field Data Analyst deployed — automated PO submission processing across all 89 POs
- Beneficiary Analytics Agent configured — demographic and outcome dashboards live
- Role-specific training sessions for Programme Officers and M&E Officers
- Document Drafting Agent activated — officer communications and donor updates automated

Phase 3 · Financial Intelligence**Psychometric Profiling, Loan Portfolio, and Compliance**

Weeks 16-28

- Psychometric Profiling System deployed — calibrated against PKSf's portfolio history and activated for new loan applicants
- Loan Portfolio Monitor connected to PO lending MIS — real-time PAR and repayment tracking across 280 POs
- Compliance & Risk Sentinel activated — ESS10 monitoring, grievance tracking, and WB compliance dashboards live
- Finance Officer role-specific training on Psychometric Profiling and portfolio management agents
- First Psychometric model performance review against actual repayment outcomes

Phase 4 · Full Intelligence**Forecasting, Full Integration, and Long-Term Partnership**

Month 7 onwards — Continuous

- Programme Forecasting Agent activated — 90-day trajectory models and DLI probability scorecards live
- Full system integration review — all 10 agents operating, all data streams connected
- System Administration Training — PKSf's internal team capable of independent management
- Ongoing consultation embedded — monthly reviews, quarterly refreshes, annual assessments
- Continuous Psychometric model improvement as loan cohorts mature and repayment data accumulates

09 · About Antarious AI**Why Antarious AI for PKSf****Purpose-built. Not adapted.**

Antarious AI is an Agentic AI platform developed by Velondra Group — built for organisations that need AI to work within their operational reality, not around it. The PKSf edition is not a generic enterprise AI tool adapted for development. It is a system designed from the ground up for microfinance programme management.

Purpose-Built for PKSf's Context

Every agent is designed around PKSf's actual workflows — WB PDO reporting, 89-PO management, microfinance operations, ustad-shagred apprenticeship, and RAISE programme structure. Not a CRM with an AI add-on.

Data Sovereignty and Security

PKSf's data is hosted in a fully isolated, dedicated environment. No PKSf data is shared with other organisations or used to train any external model. Full data residency documentation provided.

Partnership, Not a Vendor Relationship

Antarious AI's engagement with PKSf is designed as a long-term partnership — with embedded consultation, continuous improvement, and a commitment to building PKSf's internal capability rather than creating dependency.

Designed for Bangladesh's Field Reality

Assessment tools designed for BDT 10,000 Android phones. Bangla-first interfaces with audio for low-literacy users. Offline capability for chars and haors. Built for the last mile, not a Silicon Valley office.

10 · Capital Expansion Strategy

Crowdfunding, Equity Finance & Fundraising — powered by Agentic AI

A new capital frontier for PKSf

PKSF might be actively exploring three new capital channels — Crowdfunding, Equity Finance, and Strategic Fundraising. This section sets out exactly how Agentic AI builds and runs each of those channels, the specific agents required, the capital potential, and the implementation sequence. This is not theoretical. The infrastructure and AI agent architecture required for each channel is ready to deploy within the Antarious AI platform.

PKSF already possesses every asset that global capital markets demand — a \$600M programme, WB-certified impact data, 280 PO relationships, 30 years of institutional reputation, and 20 million members. What has been missing is a systematic, intelligent mechanism to connect these assets to the investors, donors, and communities ready to fund them. Agentic AI provides that mechanism — operating 24 hours a day, 7 days a week, at a cost no traditional fundraising team can match.

Why PKSf is uniquely positioned for capital expansion

Most development organisations spend years trying to build the credibility that global investors and donors require before committing capital. PKSf already has it — a quasi-governmental apex body, World Bank co-signed programme, WB-audited financials, verified impact data across 280 POs, and a psychometric credit system that turns its portfolio into a quantifiable, investable asset. The opportunity is to now systematically monetise this credibility for capital attraction — which Agentic AI makes operationally feasible without expanding headcount.

P I L L A R O N E · C R O W D F U N D I N G

AI-Powered Community Capital Mobilisation

A fully automated crowdfunding system that transforms every PKSf micro-entrepreneur into a compelling, verified campaign — with AI-generated story content, intelligent donor matching, and real-time repayment tracking visible to every backer globally.

What the crowdfunding system does

- **AI Campaign Generation**

The Campaign Story Agent reads each beneficiary's profile from PKSf's MIS — trade, location, loan purpose, business history, repayment record — and generates a compelling campaign in both Bangla and English. Every campaign is personalised, verified from live PKSf data, and adapted in tone for the target donor segment: diaspora, faith-based, women's empowerment, rural development.
- **Intelligent Donor Matching**

The Donor Intelligence Agent maintains a segmented database of potential donors across diaspora networks, impact communities, and corporate ESG teams. It matches each campaign to the highest-probability funders based on sector affinity, geography, and past giving patterns — then triggers personalised outreach automatically.
- **Campaign Performance Monitoring**

The Performance Monitor tracks all live campaigns simultaneously — funding velocity, percentage reached, days remaining. When a campaign falls behind, the agent triggers a re-engagement sequence: new donor targets, revised messaging, and updated social content — all without manual intervention.
- **Automated Impact Reporting**

After loan disbursement, the Impact Reporting Agent tracks repayment milestones and sends personalised updates to each donor: "Nasrin made her 6th on-time repayment." Annual impact reports — personalised to each donor's funded campaigns — are generated automatically from PKSf's MIS data.

Platform positioning

PKSf's crowdfunding positions as Bangladesh's equivalent of Kiva.org — but with a critical advantage: it is backed by a quasi-governmental apex institution with World Bank-audited data. This dramatically higher trust level enables PKSf to charge a platform fee (2–5% of funds raised) while offering donors a verified, safe, and high-impact vehicle. Potential integration with Kiva.org as a local partner gives PKSf access to 2.4 million existing lenders from Day 1.

Crowdfunding AI Agents — PKSf Capital Intelligence

CF-01 · Capital Intelligence

Campaign Story Generator

- ✓ Reads beneficiary profile from PKSf MIS and generates a compelling campaign narrative in Bangla and English — personalised and verified from live data
- ✓ Adapts tone for different donor segments: diaspora, faith-based, women's empowerment, rural development
- ✓ Generates campaign title, tagline, social media posts, and WhatsApp message variants — one beneficiary, full content suite produced in under 60 seconds

EXAMPLE QUERY

"Generate a crowdfunding campaign for Nasrin Begum, 34, Sylhet — tailoring business, BDT 15,000 loan for two sewing machines, 18-month repayment history with zero missed payments."

CF-02 · Capital Intelligence

Donor Intelligence & Matching Agent

- ✓ Maintains a segmented database of potential donors — diaspora, faith communities, impact investors, corporate ESG teams
- ✓ Matches each campaign to the highest-probability donors based on sector, geography, and past giving patterns
- ✓ Tracks donor engagement — opens, clicks, partial funding, repeat giving — and adjusts outreach strategy
- ✓ Identifies potential recurring donors and flags them for relationship nurturing at scale

EXAMPLE QUERY

"Identify the top 200 diaspora donors most likely to fund a women's tailoring campaign in Sylhet — ranked by giving capacity and sector affinity."

CF-03 · Capital Intelligence

Campaign Performance Monitor

- ✓ Monitors all live campaigns simultaneously — funding velocity, remaining target, time elapsed
- ✓ Triggers re-engagement sequences for campaigns falling behind funding target — new donors, revised messaging
- ✓ Auto-generates repayment update messages to donors when a milestone is reached
- ✓ Produces weekly crowdfunding performance dashboard for PKSf leadership with aggregate and per-campaign analytics

EXAMPLE QUERY

"Which campaigns are below 50% funding with fewer than 7 days remaining? Draft a re-engagement email for each and identify 3 new potential donors per campaign."

CF-04 · Capital Intelligence

Impact Story & Reporting Agent

- ✓ Post-loan disbursement, tracks beneficiary outcomes and auto-generates personalised donor impact updates — linked to live MIS repayment data
- ✓ Repayment milestone notifications sent to each donor automatically — builds trust and drives repeat investment
- ✓ Annual impact report for each donor — personalised to the campaigns they funded, generated without any manual effort
- ✓ Success story archive feeds back into future campaign creation — compounding conversion rates over time

EXAMPLE QUERY

"Generate a 6-month impact update for all donors who funded Sylhet women's campaigns in Q1 2026, pulling repayment and income change data from the MIS."

CROWDFUNDING CAPITAL POTENTIAL

500 campaigns/month at \$800 average raised = \$400K/month. Bangladesh diaspora (\$21.9B/yr in remittances) provides a vast addressable pool. With Kiva partnership, immediate access to 2.4 million existing lenders. Platform fee (3%) provides PKSf direct revenue.

Year 1: \$2-5M raised · Year 3: \$10-25M raised · Platform fee revenue: \$60K-\$750K/yr

P I L L A R T W O · E Q U I T Y F I N A N C E

AI-Driven Institutional Investor Pipeline

A sophisticated investor relations and equity pipeline system that identifies, qualifies, and nurtures Development Finance Institutions, impact funds, and institutional investors — with AI agents handling the full journey from discovery to term sheet, and the data room continuously maintained from live PKSf portfolio data.

\$195B Global blended finance market	47 Active DFIs in South Asia	\$4.2B+ DfI exposure in Bangladesh
--	--	--

Six equity capital structures Agentic AI supports

DfI Debt-for-Development

Structured concessional loans from IFC, FMO, DEG, Proparco, and OPIC — using PKSf's portfolio performance data as the basis. AI prepares the data room, monitors covenants, and drafts quarterly investor reports automatically. Realistic facility size: \$20–100M per DfI partner.

Impact Bonds

Social and development impact bonds where returns are linked to PKSf programme outcomes — employment rates, female economic participation, micro-enterprise survival rates. AI tracks every outcome metric in real time and produces the performance certificates investors need for return calculations.

Blended Finance Facilities

First-loss capital from development agencies (USAID, FCDO, EU) that de-risks commercial investor participation. AI models the tranching structure, prepares investor presentations, and monitors performance against development objectives.

Micro-Enterprise Equity Incubator

A PKSf-run incubator taking small equity positions in the highest-performing PKSf micro-enterprises — identified by the Psychometric Profiling and Beneficiary Analytics agents. Impact funds invest alongside PKSf in a curated portfolio of high-potential informal enterprises.

Green & Sustainability Bonds

PKSf's work in climate-affected chars and haors qualifies for green bond issuance. AI prepares the impact framework, monitors green KPIs, and generates the second-party opinion documentation required by ICMA green bond standards.

Islamic Finance & Co-Investment

Shariah-compliant structures with IsDB, Waqf funds, and Grameen Foundation. AI prepares Shariah-compliant programme descriptions, Islamic impact metrics, and co-lending proposals. Structured co-investment agreements at preferential rates.

Equity Finance AI Agents — PKSF Capital Intelligence

EQ-01 · Capital Intelligence

Investor Discovery & Matching Agent

- ✓ Continuously monitors 500+ DFIs, impact funds, and institutional investors globally — tracking mandate updates, new capital deployments, and Bangladesh exposure
- ✓ Scores each potential investor against PKSF's portfolio profile — sector, geography, return expectations, SDG alignment
- ✓ Generates a ranked investor target list with personalised outreach rationale for each
- ✓ Alerts when an investor's mandate changes to include Bangladesh microfinance — real-time opportunity detection

EXAMPLE QUERY

"Identify the top 20 impact funds globally whose mandate aligns with PKSF's women's microfinance portfolio — ranked by AUM, recent Bangladesh activity, and SDG 1, 5, and 8 focus."

EQ-02 · Capital Intelligence

Data Room & Portfolio Package Agent

- ✓ Automatically compiles investor-grade portfolio data packages — PAR analysis, sector diversification, geographic spread, repayment curves by cohort
- ✓ Generates Due Diligence data rooms with WB-audited financials, programme structure, and governance documentation
- ✓ Produces investor-specific tearsheets — customised to each investor's mandate and reporting format
- ✓ Keeps the data room current — automatically updates with new MIS data every quarter without any manual effort

EXAMPLE QUERY

"Prepare a due diligence data room for IFC's Financial Institutions team — include Q1 2026 portfolio performance, PAR30/90 by sector, psychometric profiling methodology, and the WB mid-term review findings."

EQ-03 · Capital Intelligence

Investor Relations & Pipeline Agent

- ✓ Full CRM for the equity investor pipeline — stages every investor relationship from first contact to term sheet to close
- ✓ Drafts investor outreach emails, meeting prep documents, and follow-up correspondence — personalised to each investor
- ✓ Tracks all investor interactions and surfaces next-best-action recommendations for PKSF leadership
- ✓ Quarterly investor newsletters — portfolio updates auto-generated and personalised to each investor's position

EXAMPLE QUERY

"Show me the equity investor pipeline — which DFIs are in active due diligence, which have gone quiet, and draft a re-engagement note for anyone who has not responded in 30+ days."

EQ-04 · Capital Intelligence

Impact Bond & Structure Design Agent

- ✓ Models different capital structure scenarios — blended finance tranching, impact bond coupon rates, co-investment terms — with scenario analysis
- ✓ Tracks outcome metrics required for impact bond performance calculations automatically from PKSf's MIS
- ✓ Drafts term sheet language, outcome metric frameworks, and investor reporting templates for each capital structure
- ✓ Green bond framework preparation — KPI tracking, SPO documentation, ICMA principles alignment

EXAMPLE QUERY

"Model a \$30M blended finance facility: \$10M first-loss from DFID, \$20M commercial from IFC at 7%. Show projected return to IFC under base and optimistic scenarios using current portfolio PAR data."

EQUITY FINANCE CAPITAL POTENTIAL

IFC alone has deployed \$800M+ in Bangladesh financial institutions. A \$20–50M blended facility from one DFI partnership is a realistic Year 2–3 outcome given PKSf's credentials and an AI-prepared investor data room. PKSf's Psychometric Profiling data makes its portfolio investable in ways that most MFIs cannot demonstrate.

Year 2 target: \$10–30M first facility · Year 4: \$50–100M total facilities structured

PILLAR THREE · STRATEGIC FUNDRAISING

AI Fundraising Intelligence System

A comprehensive AI system that continuously monitors global grant opportunities, builds and maintains funder relationships, generates proposal drafts, and produces personalised impact reports — running a world-class fundraising operation without requiring a large specialist fundraising team.

2,000+	\$3.2B	48hrs
Grant programmes monitored 24/7	Bangladesh ODA per year	Time to first proposal draft

Six funder categories — and how AI reaches each one

Multilateral Development Banks (WB, ADB, IFAD, IsDB)

WB IBRD/IDA trust funds alone offer \$2B+ in Bangladesh-eligible grants annually. AI monitors all MDB grant windows, preparing PKSf-aligned concept notes before funding windows open — giving PKSf a structural advantage over organisations that only discover opportunities after they are posted.

Bilateral Development Agencies (USAID, FCDO, GIZ, JICA)

Each bilateral has Bangladesh-specific funding windows for economic inclusion, women's empowerment, and skills development that directly align with PKSf's portfolio. AI tracks every programme, deadline, and criteria change — and generates the first draft of each application within 48 hours of a window opening.

Private Foundations (Gates, Ford, Mastercard, Skoll, Omidyar)

All have active economic inclusion mandates. PKSf's scale and data quality make it a tier-one applicant. AI identifies the right programme officers at each foundation, monitors their stated priorities and recent grants, and prepares culturally resonant proposals tailored to each foundation's specific language and values.

Climate & Green Funds (GCF, Adaptation Fund, LDCF)

Bangladesh's climate vulnerability and PKSf's work in chars and haors creates a compelling climate adaptation narrative. AI maps PKSf's existing programme activities to climate finance KPIs and generates GCF-format proposals — a document type that currently takes specialist consultants weeks to produce.

Islamic Finance & Zakat (IsDB Waqf Fund, IDB Trust Funds)

An underexplored but significant capital pool for PKSf. AI prepares Shariah-compliant programme descriptions, Islamic impact metrics, and structured proposals for Islamic finance institutions and organised Zakat distribution channels — opening a capital pool that most development NGOs never access systematically.

Corporate ESG & Philanthropy (Grameenphone, Unilever, Dutch-Bangla Bank)

Corporations with Bangladesh operations and CSR mandates. AI generates tailored partnership proposals connecting each corporation's ESG narrative to PKSf's programme outcomes — moving beyond generic sponsorship asks to structured cause-related partnerships with measurable co-benefits.

Fundraising AI Agents — PKSf Capital Intelligence

FR-01 · Capital Intelligence

Grant Intelligence & Opportunity Scanner

- ✓ Monitors 2,000+ global grant programmes, trust funds, and RFP portals continuously — 24 hours a day, 7 days a week
- ✓ Scores every new grant opportunity against PKSf's programme portfolio for alignment — only high-fit opportunities escalated to officers
- ✓ Tracks application deadlines, LOI requirements, and eligibility criteria — automated calendar with preparation timelines built in
- ✓ Weekly grant opportunity briefing — top 5 opportunities that week with PKSf-specific fit assessment

EXAMPLE QUERY

"What new grant opportunities have opened this month that align with PKSf's women's empowerment and microfinance work? Rank them by funding size and application feasibility."

FR-02 · Capital Intelligence

Proposal Generation Agent

- ✓ Generates complete first-draft grant proposals — executive summary, background, programme description, results framework, budget narrative
- ✓ Pulls verified programme data from PKSf's MIS automatically — no manual data gathering required by programme officers

- ✓ Adapts proposal language and structure to each funder's specific guidelines, evaluation criteria, and preferred framing
- ✓ Proposal library — stores approved sections for reuse across future applications, compounding efficiency with every submission

EXAMPLE QUERY

"Draft a concept note for the Mastercard Foundation's Economic Inclusion programme — 6 pages, using PKSF's Q1 2026 beneficiary data, with emphasis on youth employment and digital financial inclusion."

FR-03 · Capital Intelligence**Donor Relationship Management Agent**

- ✓ Full CRM for every donor and funder relationship — tracks all interactions, commitments, reporting obligations, and renewal timelines
- ✓ Proactive stewardship — generates personalised touchpoints for each donor: programme visits, updates, seasonal greetings, impact milestones
- ✓ Renewal alerts — flags every grant renewal window 90 days before deadline with a pre-drafted renewal application ready for officer review
- ✓ Donor segmentation — groups donors by interest, giving level, and relationship stage for targeted, appropriate communication

EXAMPLE QUERY

"Which of our current donors have grant renewals coming up in the next 6 months? For each, draft a preliminary renewal narrative and flag any programme outcomes that strengthen our renewal case."

FR-04 · Capital Intelligence**Impact Reporting & Donor Comms Agent**

- ✓ Generates personalised impact reports for every active donor — pulling live programme data and mapping it to the donor's specific funded activities
- ✓ Quarterly donor newsletters — programme highlights, success stories, and beneficiary spotlights, auto-generated and personalised to each recipient
- ✓ Compliance report automation — formats programme outcomes into each donor's specific reporting template with no manual effort
- ✓ Success story library — curated impact narratives stored and reused across donor communications for maximum resonance

EXAMPLE QUERY

"Generate the Q2 2026 impact report for USAID — 12 pages, covering economic inclusion outcomes, female participation rates, and three beneficiary success stories from Rajshahi division."

FUNDRAISING CAPITAL POTENTIAL

AI grant scanner identifying 2 additional grants per year at \$2M average = \$4M incremental Year 1. PKSF's grant win rate with professional AI-assisted proposals is estimated to improve from the sector average of 15% to 30%+. Renewal rates with AI stewardship: 85%+ vs industry average of 60%.

Year 1 incremental: \$4-8M · Year 3 incremental: \$15-30M/yr

The Capital Intelligence Master Agent

Above the 12 specialist capital agents sits a Capital Intelligence Master Agent — the same central orchestrator architecture as PKSf's Programme Intelligence core, but focused entirely on PKSf's capital strategy. It synthesises signals across crowdfunding, equity, and fundraising, giving the MD a unified weekly view of the entire capital pipeline.

PKSF CAPITAL COMMAND CENTRE · MASTER AGENT

One interface. Every capital channel. Real-time.

Natural language queries over the entire capital pipeline — crowdfunding campaigns, equity investor status, grant applications, donor relationships, and revenue projections — all synthesised into single, actionable intelligence for the MD and Board.

CF Agents · Campaign Story · Donor Matching · Performance · Impact Reporting
 EQ Agents · Investor Discovery · Data Room · IR Pipeline · Structure Design
 FR Agents · Grant Scanner · Proposal Gen · Donor CRM · Impact Reporting
 Master Functions · Cross-channel synthesis · Capital dashboard · Revenue forecasting
 · MD weekly brief

Capital expansion implementation roadmap

Phase 1 · Months 1-3 · Entry

Grant Intelligence System — the fast win

Lowest risk. First measurable results within 90 days.

- Deploy FR-01 Grant Intelligence Scanner — 2,000+ grant programmes monitored from Day 1
- Build PKSf donor CRM — all existing donor relationships mapped and tagged in the system
- First 5 priority grant opportunities identified and proposal drafts produced for PKSf review
- Deploy FR-04 Impact Reporting Agent — automated donor impact updates begin immediately
- Present 90-day results to MD: grant pipeline created, proposals submitted, donor relationships enhanced

Phase 2 · Months 3-9 · Crowdfunding

Launch the PKSf Crowdfunding Platform

First community capital mobilised. Diaspora donor network activated.

- Deploy CF-01 Campaign Story Generator — first 100 beneficiary campaigns produced and reviewed
- Build donor database — diaspora contacts, faith community leaders, corporate ESG

contacts seeded

- Soft launch with 50 pilot campaigns — performance data used to calibrate the matching algorithm
- Explore Kiva.org partnership — PKSF as a field partner using Kiva's existing 2.4M-lender network
- Full launch: 500 campaigns/month, automated repayment tracking, impact reporting live

Phase 3 · Months 9-18 · Equity

Activate the Institutional Investor Pipeline

First DFI conversations initiated. Portfolio data package live.

- Deploy EQ-01 Investor Discovery Agent — first investor target list presented to PKSF leadership
- Build investor-grade data room from PKSF's WB-audited portfolio data and Psychometric Profiling outputs
- Initiate first-tier outreach to 5 target DFIs — IFC, FMO, British International Investment, ADB, IsDB
- Structure first blended finance facility concept — modelling three scenarios with MD and Board
- First term sheet discussions targeted by Month 18

Phase 4 · Month 18+ · Full Integration

All three channels operational — Capital Intelligence Master Agent live

PKSF's capital diversification strategy fully operational. MD receives weekly capital brief.

- Capital Intelligence Master Agent live — unified dashboard across all three channels for MD and Board
- First DFI facility closed — blended finance structure operational, investor reporting automated
- Crowdfunding at scale — 500+ campaigns/month, \$5M+ raised annually, diaspora donor community established
- Grant programme mature — 20% improvement in grant win rate, full donor CRM active, renewal pipeline managed
- PKSF's capital dependency on World Bank reduced from 95% to 70% — strategic resilience achieved

TOTAL CAPITAL OPPORTUNITY BY YEAR 3

\$65M+

in new capital channels activated

\$25M crowdfunding raised · \$30M DFI facility · \$15M incremental grants

None of which existed before the Antarious AI capital system was deployed.

ANTARIOUS AI FOR PKSf · CONFIDENTIAL PROPOSAL

Ready to transform
PKSf's operations.

This proposal outlines a system that is ready to deploy. The agents are built. The Psychometric Profiling model is validated. The training programme is designed. What is needed now is a conversation about where to begin.
